John Polkinghorne, ordained member of the Royal Society, past President of Queen's College Cambridge, Knight Commander of the Order of the British Empire, 2002 Templeton Prize winner, theoretical physicist, and theologian writes in breathless style to unfold core Christian doctrine in dialogue with science. His work deftly addresses how one would interpret and commend Christian faith in the contemporary world as he elucidates the key topics in the dialogue of religion with science. Polkinghorne's work addresses the hope Christians have--present and future--in the faithfulness of a loving God who stands alongside them today and for all eternity. Eschatological hope enables and empowers Christian life and emerges in God's resurrection of Jesus from the horrific crucifixion. Polkinghorne ably supports his thesis with a strong argument for the resurrection built on the kenotic acts of God. His thesis sees Christian eschatology as the advent of hope--the heart of faith. In Christian eschatology, as argued by Polkinhorne and supported in the work of Jurgen Moltmann and Nicholas T. Wright, Christ's presence is not some far off event, but present reality.

""Wilson has given us a remarkable window in the place of science, contemporary culture, and Christianity. With an evangelistic ear and eye, he has given the Church and the Academy a helpful resource in navigating the terrain that some have considered impassable."" --Michael J. Gehring, Senior Pastor, Broad Street United Methodist Church, Statesville, NC; Adjunct Professor of Pastoral Theology, Hood Theological Seminary ""Science and theology have too often been at odds in modernity. John Wilson seeks to correct that conflict, and in this helpful text, puts before us a compelling resource of how John Polkinghorne's work provides resources to understand the church's mission in light of physics and modern science. . . . To persons who want to go deeper into the nature of physics and the life of theology, Wilson's book will offer a good first step."" --Andrew Kinsey, Pastor, Grace United Methodist Church, Franklin, IN John Wilson joined the Sam Houston State University physics faculty in 2009. Wilson, a retired deacon in the Texas Annual Conference of the United Methodist Church, in addition to his work in physics, devotes considerable time to theology with particular interest in the dialogue of religion with science--supported with his having obtained a PhD in physics and a DTh in theology. In theology, he has extensively examined the work of John C. Polkinghorne.

In *The Creator Revealed*, you will learn about scientific discoveries of the origin of the universe and its design and how they agree with the Bible and reveal God's character.

**A Christian Geologist Explains Why the Earth Cannot Be 6,000 Years Old: Let's Heal the Divide in the Church** By: Dr. Lorence G. Collins This book is about the geology of the Earth. Written by a fully committed Christian, it asserts that accepting the knowledge provided by studies in science is in no way in conflict with following the teachings of Jesus. If a Christian understands how God has done his creation, then he/she can be a better steward in taking care of the Earth and its life. The general themes of the book are: to expose the false beliefs of young-Earth creationists regarding the age of the Earth being 6,000 years old and that Noah's Flood must have been worldwide (global) in extent; and to suggest that the Bible is not a science text. The contents of this book can be understood by both people trained in science and those who have no background in science. It is intended to give a valuable source of insights about how science works; to provide a way to support and guide a Christian witness to the world, and to be a "bridge" to make this possible. As Christians, our greater mission is not to battle over divisions in religious beliefs but to heal the sick, feed the hungry, minister to the abandoned, and so on.

**#1 NEW YORK TIMES BESTSELLER** When and how did the universe begin? Why are we here? What is the nature of reality? Is the apparent "grand design" of our universe evidence of a benevolent creator who set things in motion—or does science offer another explanation? In this startling and lavishly illustrated book, Stephen Hawking and Leonard Mlodinow present the most recent scientific thinking about these and other abiding mysteries of the universe, in

nontechnical language marked by brilliance and simplicity. According to quantum theory, the cosmos does not have just a single existence or history. The authors explain that we ourselves are the product of quantum fluctuations in the early universe, and show how quantum theory predicts the “multiverse”—the idea that ours is just one of many universes that appeared spontaneously out of nothing, each with different laws of nature. They conclude with a riveting assessment of M-theory, an explanation of the laws governing our universe that is currently the only viable candidate for a “theory of everything”: the unified theory that Einstein was looking for, which, if confirmed, would represent the ultimate triumph of human reason.

Three decades ago, federal policymakers - Republicans and Democrats - embarked on a general strategy of deregulation. In the electricity, gas delivery, and telecommunications industries, the strategy called for restructuring to separate production from transmission and distribution, followed by elimination of price controls. The expected results were lower prices and increased quality, reliability, and scope of services. Paul MacAvoy, an economist with forty years of experience in the regulatory field, here assesses the results and concludes that deregulation has failed to achieve any of these goals in any of these industries. MacAvoy shows that we now have only partial deregulation, a mixture of oligopoly structure with direct price control. He explores why this system leads to volatile and high prices, reduced investment, and low profitability, and what policy actions can be implemented to address these problems.

Exam Board: AQA Level: AS/A-level Subject: Religious Studies First Teaching: September 2016 First Exam: June 2018 Engage students with accessible content that draws out the key theories, ensuring students have a thorough understanding of Christianity and the philosophical and ethical issues; developed by subject specialist John Frye and the leading Religious Studies publisher\*. - Confidently teach 'Philosophy and religion' and 'Ethics, religion and society' with comprehensive coverage of the key philosophers, concepts and theories along with sources of theological authority - Supports learning and revision with a range of contemporary activities, discussion points and unit summaries - Prepares students for assessment with revision questions at the end of each chapter and practice questions tailored to the assessment objectives Content covered: Philosophy and religion Sections A and B (Section A is covered through Christianity) Ethics, religion and society Sections A and B (Section A is covered through Christianity) \*Taken from Educational Publishers Council statistics

This book sheds new light on the biographical approach in the history of physics by including the biographies of scientific objects, institutions, and concepts. What is a biography? Can biographies also be written for non-human subjects like scientific instruments, institutions or concepts? The respective chapters of this book discuss these controversial questions using examples from the history of physics. By approaching biography as metaphor, it transcends the boundaries between various perspectives on the history of physics, and enriches our grasp of the past.

A renowned scientist and author combines decades of scientific research and biblical study to present a groundbreaking new paradigm of how to understand God.
