This device supports an external RF antenna to increase 3G or 4G signal strength. The antenna connectors can be found at the base of the device. The antenna connectors are located on either side of the microUSB port. To access them the rubber doors must be opened by sliding a fingernail into the notch on the bottom of the cover, then lifting up.

This book assesses how progress in disarmament diplomacy in the last decade has improved human security. In doing so, the book looks at three cases of the development of international norms in this arena. First, it traces how new international normative understandings have shaped the evolution of and support for an Arms Trade Treaty (the supply side of the arms trade); and, second, it examines the small arms international regime and examines a multilateral initiative that aims to address the demand side (by the Geneva Declaration); and,

third, it examines the evolution of two processes to ban and regulate cluster munitions. The formation of international norms in these areas is a remarkable development, as it means that a domain that was previously thought to be the exclusive purview of states, i.e. how they procure and manage arms, has been penetrated by multiple influences from worldwide civil society. As a result, norms and treaties are being established to address the domain of arms, and states will have more multilateral restriction over their arms and less sovereignty in this domain. This book will be of much interest to students of the arms trade, international security, international law, human security and IR in general. Denise Garcia is Assistant Professor in the Department of Political Science at Northeastern University, Boston. She is author of *Small Arms and Security* (Routledge 2006).

Hormonal Proteins and Peptides: Corticotrophin (ACTH) is a collection of papers dealing with

the chemistry and biology of adrenocorticotrophic hormone (ACTH). One paper describes the structure-function studies made on ACTH, with reference to the steroidogenic activity of synthetic ACTH fragments and analogs. The paper also discusses the melanocyte-stimulating hormone (MSH) activity, as well as the behavioral effects among the extraadrenal properties of ACTH. Some problems related to ACTH receptors include the role of extracellular calcium and the characterization of ACTH receptors in fetal and adult human adrenocortical cells. Another paper describes ACTH synthesis in the pituitary and extrapituitary tissues. One paper analyzes the role of ACTH in the regulation process concerning the production of steroid hormones, particularly, on the generation of glucocorticoids. Glucocorticoids are the characteristic products of the zona fasciculata. Another paper shows that the steady-state level of ACTH synthesis and release are due to the effects of stimulatory factors such as CRF and inhibitory hormones (namely, the glucocorticoids on the corticotroph). The maintenance of responsiveness of ACTH-secreting cells (as a response to individual stress in humans) can be a manifestation of an inherent molecular characteristic. This collection will prove valuable to microbiologists, biotechnologists, and academicians connected with the biological sciences.
