fertilisation, there is the formation of the inner cell mass and outer cell mass and the zygote eventually becomes a blastocyst which is then ready for implantation. The inner cell mass of the embryo then undergoes a highly specialised transformation called ...

~~Embryology – TeachMeAnatomy~~

Embryology is the branch of biology concerned with the development of new organisms. Embryologists track reproductive cells (gametes) as they progress through fertilization, become a single-celled zygote, then an embryo, all the way to a fully functioning organism.

~~Embryology – Definition, History and Careers | Biology ...~~

This page shows some key events of human development during the embryonic period of the first eight weeks (weeks 1 - 8) following fertilization. This period is also considered the organogenic period, when most organs within the embryo have begun to form.

~~Embryonic Development – Embryology~~

Embryology is a collection of objects of varying sizes, made of various rough-hewn fabrics and stuffed. When installed, the boulder-like forms are accumulated into large group environments that the viewer can walk into and around. The objects inhabit an ambiguous, disturbing place between bodies, organic matter and rock.

~~‘ Embryology ’ , Magdalena Abakanowicz, 1978 – 80 | Tate~~

Embryogenesis, the first eight weeks of development after fertilization, is an incredibly complicated process. It ' s amazing that in eight weeks we ' re transforming from a single cell to an organism with a multi-level body plan. The circulatory, excretory, and neurologic systems all begin to develop during this stage.

Embryology

Following fertilisation, the nervous system begins to form in the 3rd week of development. It continues after birth and for many years into the future. Structurally, the nervous system is divided into two parts: Central nervous system – consists of the brain and the spinal cord.

~~Development of the Central Nervous System—Spinal Cord ...~~

Cleavage, in embryology, the first few cellular divisions of a zygote (fertilized egg). Initially, the zygote splits along a longitudinal plane. The second division is also longitudinal, but at 90 degrees to the plane of the first. The third division is perpendicular to the first two and is equatorial in position.

~~Cleavage | embryo | Britannica~~

Human embryology is the study of this development during the first eight weeks after fertilisation. The normal period of gestation (pregnancy) is about nine months or 40 weeks. The germinal stage refers to the time from fertilization through the development of the early embryo until implantation is completed in the uterus.

~~Human embryonic development—Wikipedia~~

embryology This paper explores the question of cell autonomy as it was debated within late nineteenth and early twentieth-century embryology, cytology, and physiology. From the Cambridge English Corpus We do that in this country with health and safety, we do that with genetic modification, and we do it for human fertilization and embryology.
