call ...~~

The 11be PHY ad-hoc has completed its agenda. Please respond to this message if you'd like to add a submission to the agenda. If fewer than three submissions are on the agenda, Thursday's 11be PHY ad-hoc call will be cancelled. Please send any requests before the start of the 11be joint call on Wednesday 12/9 at 9 AM EST. Thanks, Sigurd

# Download Ebook IEEE 802.11 Ad Hoc Networks

Power-saving protocols for IEEE 802.11-based multi-hop ad hoc networks Abstract: Power-saving is a critical issue for almost all kinds of portable devices. In this paper, we consider the design of power-saving protocols for mobile ad hoc networks (MANETs) that allow mobile hosts to switch to a low-power sleep mode.

~~Power-saving protocols for IEEE 802.11-based multi-hop ad hoc networks~~

In IEEE 802.11, a network without an AP is called an ad hoc network. In this paper, we consider the design of power-saving protocols for mobile ad hoc networks (MANETs) that allow mobile hosts to switch to a low-power sleep mode.

## Performance

~~Solved: In IEEE 802.11, A Network Without An AP Is Called ...~~

IEEE 802.11 is part of the IEEE 802 set of local area network (LAN) protocols, and specifies the set of media access control (MAC) and physical layer (PHY) protocols for implementing wireless local area network (WLAN) Wi-Fi computer communication in various frequencies, including but not limited to 2.4 GHz, 5 GHz, 6 GHz, and 60 GHz frequency bands.

“peer-to-peer” mode. Ad-hoc networks don't require a centralized access point. Instead, devices on the wireless network connect directly to each other. If you set up the two laptops in ad-hoc wireless mode, they'd connect directly to each other without the need for a centralized access point.
