1) Thinking with Mathematical Models Homework Answers - Mr ...

To set up or model a linear equation to fit a real-world application, we must first determine the known quantities and define the unknown quantity as a variable. Then, we begin to interpret the words as mathematical expressions using

A mathematical model for the evolution of the (still unspecified) quantity a_n could take the form $a_{n+1} = r a_n + c$. In words, the new value is a scalar multiple of the old value a_n set by some constant r . This model is common, e.g., it is used for modeling bank loans. One might amend the model to make the dependence
