In this entertaining and observant memoir, Johns takes us on a tour of his world during the heady years of the sixties, with beguiling stories that will delight music fans the world over, such as when he had to bail the Steve Miller Band out of jail on their second day in London, his impressions of John and Yoko during the Abbey Road sessions, or running into Bob Dylan at JFK and being asked by Dylan to work on a collaborative album with him, the Stones, and the Beatles, which never came to pass. Johns was there during some of the most iconic moments in rock and roll history.

Geoff Emerick became an assistant engineer at the legendary Abbey Road Studios in 1962 at age fifteen, and was present as a new band called the Beatles recorded their first songs. He later worked with the Beatles as they recorded their singles " She Loves You " and " I Want to Hold Your Hand, " the songs that would propel them to international superstardom. In 1964 he would witness the transformation of this young and playful group from Liverpool into professional, polished musicians as they put to tape classic songs such as " Eight Days A Week " and " I Feel Fine. " Then, in 1966, at age nineteen, Geoff Emerick became the Beatles ' chief engineer, the man responsible for their distinctive sound as they recorded the classic album Revolver, in which they pioneered innovative recording techniques that changed the course of rock history. Emerick would also engineer the monumental Sgt. Pepper and Abbey Road albums, considered by many the greatest rock recordings of all time. In Here, There and Everywhere he reveals the creative process of the band in the studio, and describes how he achieved the sounds on their most famous songs. Emerick also brings to light the personal dynamics of the band, from the relentless (and increasingly mean-spirited) competition between Lennon and McCartney to the infighting and frustration that eventually brought a bitter end to the greatest rock band the world has ever known.

Recounts the stories of the music world's most notable recording studios and of history-making records that were made at each, from the John Coltrane sessions in Rudy Van Gelder's living room to Frank Sinatra's recordings at Capital Records.

(Technical Reference). More than simply the book of the award-winning DVD set, Art & Science of Sound Recording, the Book takes legendary engineer, producer, and artist Alan Parsons' approaches to sound recording to the next level. In book form, Parsons has the space to include more technical background information, more detailed diagrams, plus a complete set of course notes on each of the 24 topics, from "The Brief History of Recording" to the now-classic "Dealing with Disasters." Written with the DVD's coproducer, musician, and author Julian Colbeck, ASSR, the Book offers readers a classic "big picture" view of modern recording technology in conjunction with an almost encyclopedic list of specific techniques, processes, and equipment. For all its heft and authority authored by a man trained at London's famed Abbey Road studios in the 1970s ASSR, the Book is also written in plain English and is packed with priceless anecdotes from Alan Parsons' own career working with the Beatles, Pink Floyd, and countless others. Not just informative, but also highly entertaining and inspirational, ASSR, the Book is the perfect platform on which to build expertise in the art and science of sound recording.

Looks at the history of recorded music and technology of the industry from Thomas Edison's invention of the phonograph in 1876 to the MP3 players.

(Book). From the author's first glimpse of a magical recording studio in the mid-1960s up through a busy career that continues to the present day, this rollicking story can only be told by those that were there. As the young tape operator on sessions for the Rolling Stones, Jimi Hendrix, and Joe Cocker at the famed Olympic Sound Studios in London, Phill learned the ropes from experienced engineers and producers such as Glyn Johns and Eddie Kramer. Phill soon worked his way up engineering sessions for Mott the Hoople, David Bowie, Led Zeppelin, Bob Marley and many other lendary rockers. He eventually became a freelance engineer/producer and worked with Roxy Music, Go West, Talk Talk, and Robert Plant. But more than a recollection of participating in some of the most treasured music of the past 40 years, this is a man's journey through life as Phill struggles to balance his home and family with a job where drug abuse, chaos, rampant egos, greed, lies and the increasingly invasive record business take their toll. It's also a cautionary tale, where long workdays and what once seemed like harmless indulgences become health risks, yet eventually offer a time to reflect back on.
